

BeSS report – June 2017

Data compiled by Valérie Desnoux – H-alpha monitoring
Be projects section by Ernst Pollmann [here](#)

Observateur	Nb spec	• 30 stars were observed
Guarro Fló	12	• 13 Observers contributed this month
Bohlsen	9	• 58 Spectra
Sawicki	9	
Campos	4	
TERRY	4	
bertrand	4	
de Bruin	3	
Fosanelli	3	EE HL Lib ME NW Ser
Graham	3	ME 66 Oph DE iot Ara
GARDE	2	ME 48 Lib DE
KREIDER	2	EE CX Dra
Pollmann	2	ME eps Cas
de France	1	DE kap01 Aps

Events of the month...

EE: Emission Event, ME: Moderate Events, DE: Decreasing Event

BeSS report Materiel & Method

For each star having a spectrum loaded in BeSS database for the monthly report the last six spectra in BeSS are displayed. A visual check is performed to detect any change in the H-alpha profile. Sometimes a copy/paste is needed for subtle evolutions.

For each star, which exhibits a change, the above series are generated with the following steps. Each spectrum is zoomed on the H-alpha line. Each profile is scaled on the continuum on a region around 6580 angströms. The Heliocentric correction is applied, and the x-axis is converted into Doppler velocity centered on H-alpha.

If too many spectra of the object are available, a shorter period of observation is displayed and thus the length period is indicated (1yr, 3yrs).

All data are processed with Visual Spec with dedicated function to automatically load BeSS spectra and automatize most of the above processing.
