

- 329 spectra acquired, 94 if excluding V743 Mon
- 60 objects observed
- 16 observers contributed

The most observed objects were V743 Mon with 235 spectra, Zeta Tau, Pleione and 5CnC

Noticeable evolutions of H-alpha line

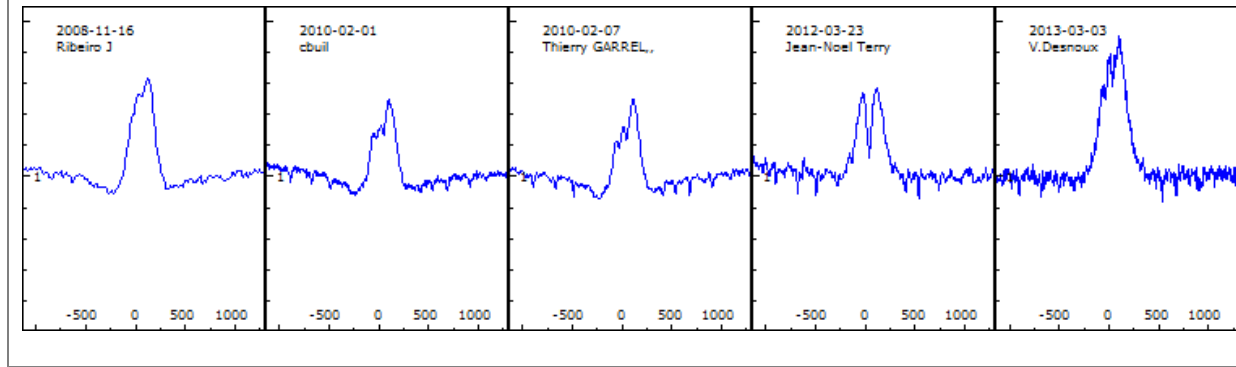

QR Vul had its outburst in August 2011 – previous one was in August 2008 with a return to absorption profile by may 2009

HD 44996

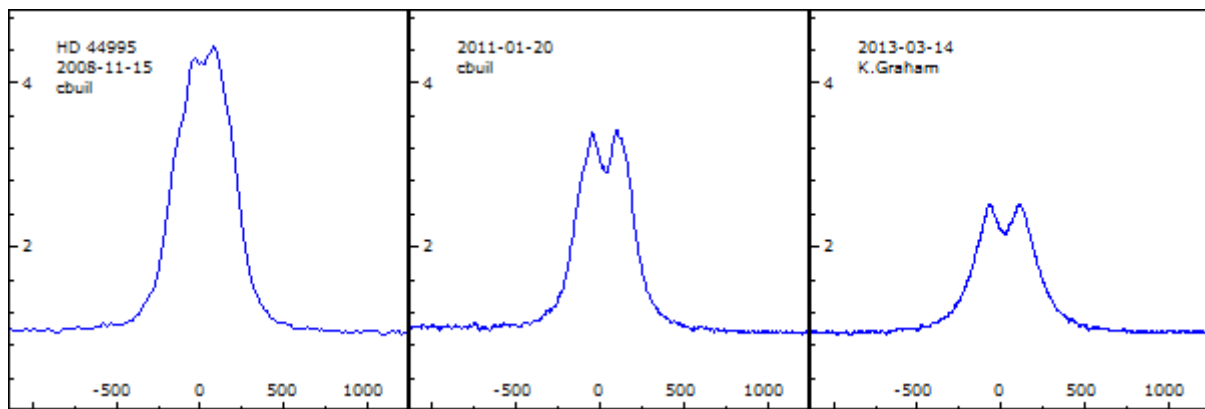

Increase of intense and apparition of triple peak with asymmetry

Moderate evolutions of H-alpha line

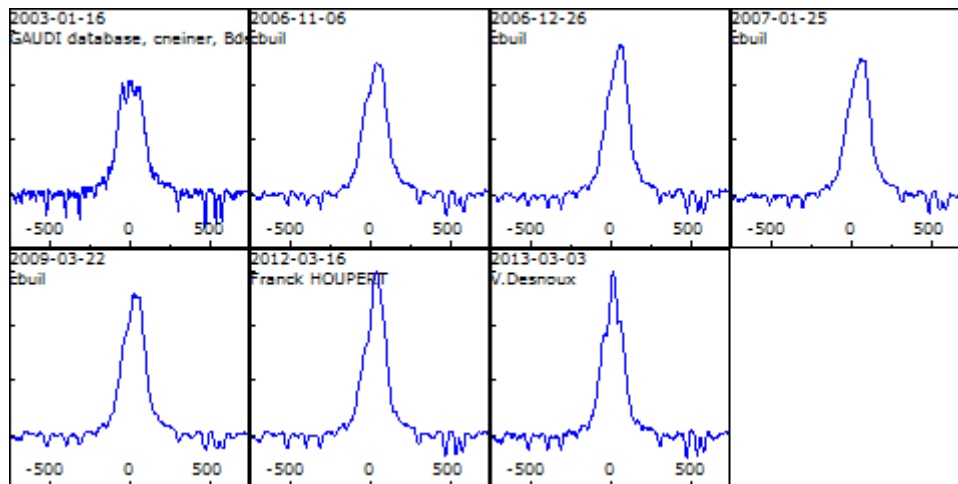

HD 44995

Intensity decreasing

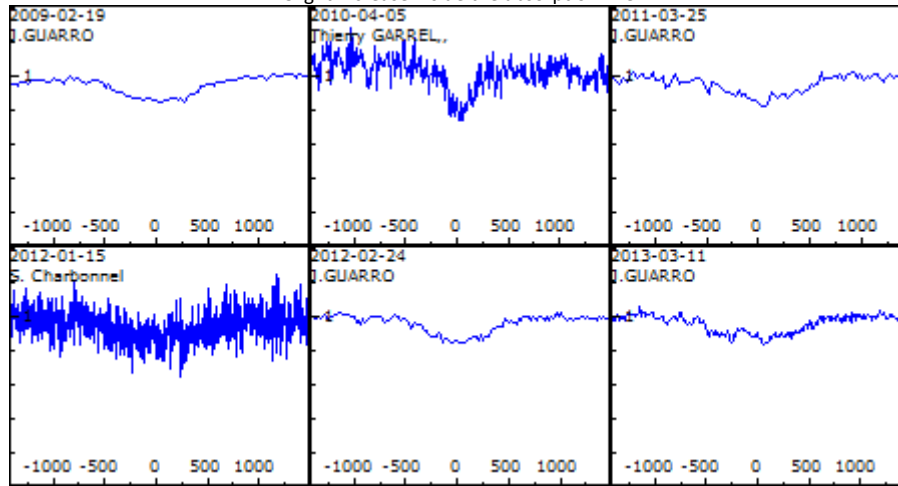

HD50820

Triple peak structure apparition

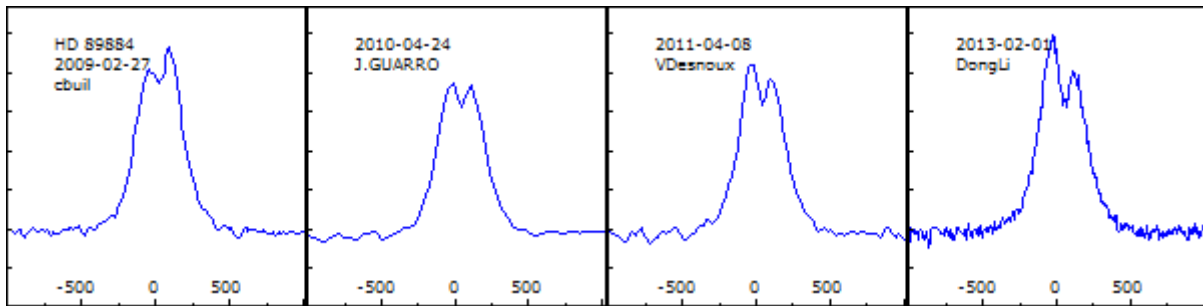

IU Aur

Slight increase inside the absorption line

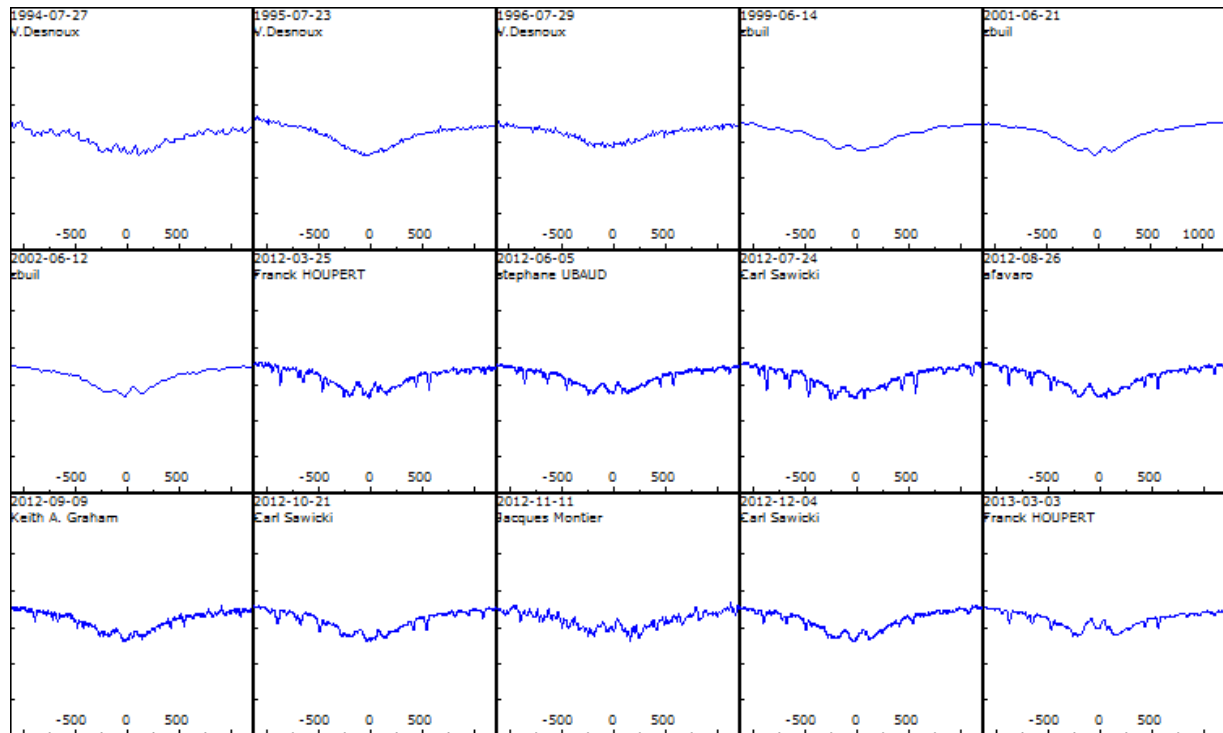

HD 89884

V/R peak evolutions

Lam Cyg

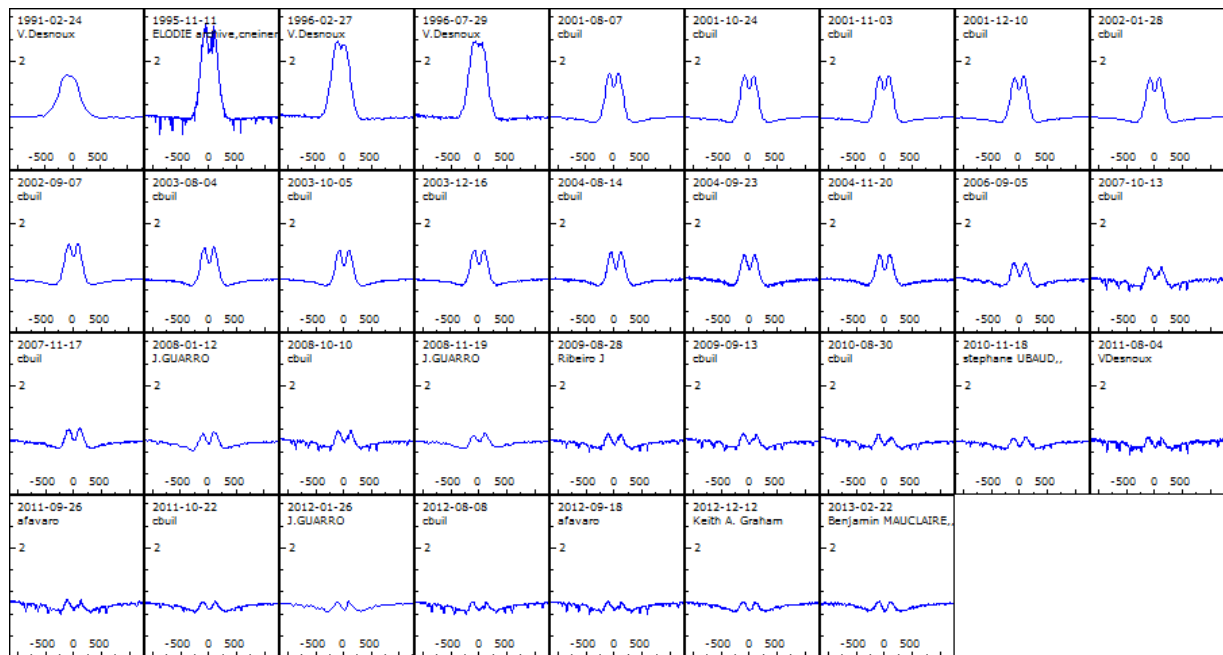

Slight increase of the H-alpha emission peak within the larger absorption line

In the past...

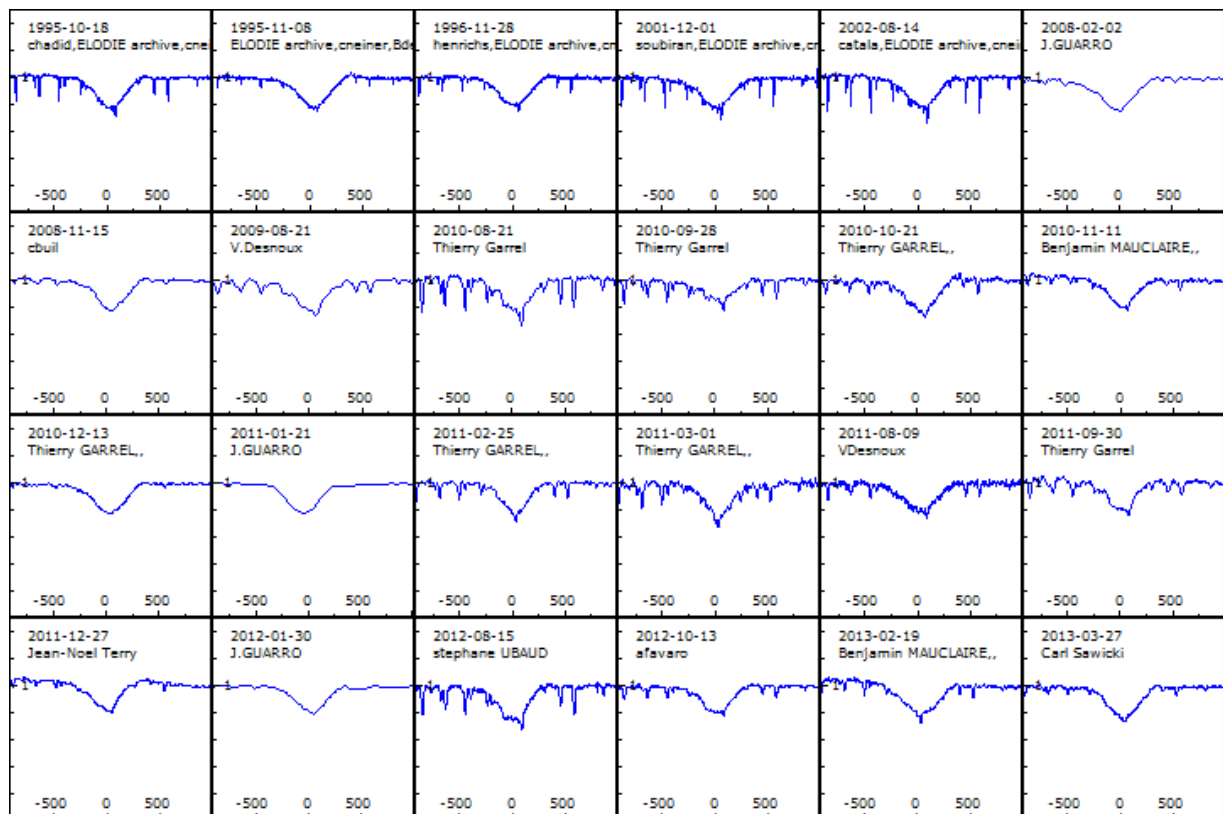

23 Tau

Over time decreasing of the emission line intensity

Menkhib – Ksi Per

Blue-red wings profile evolutions

To continue to monitor
